TenneT Market Review

WHAT WAS THE GOAL?

The annual report of TenneT did not include market investigations. The aim of the Market Review was therefore to conduct a comprehensive, extensive and unbiased review of historical situations at electricity markets in Europe.

HOW WAS THE PROCEDURE?

Major events and market influences were discussed in order to create the storyline. The analyzed background information was then examined, visualized and interpreted. The detailed report includes in-depth analysis of key market indicators such as electricity market prices, fuel prices and generator margins, electricity consumption and generation as well as balancing, redispatch and special events. Each review involved a workshop series at the TenneT headquarters in Arnhem in the Netherlands.

SUPPORTED REVIEWS

WHAT WERE THE RESULTS?

Five brochures with international media interest were produced. Extensive visualization templates were created, which are used by TenneT for further internal analysis. Analysis and figures of the Market Review were used by the top management of TenneT at annual general meetings.
